Figure 1 consists of two vertically aligned plots. The top plot shows a single solution curve  $u$  as a function of a parameter. The curve is zero for small values of the parameter, then rises sharply to a peak, and then decreases. A vertical line is drawn at the peak. The bottom plot shows two solution curves. One curve is shifted to the left of the vertical line, and the other is shifted to the right. Both curves are zero for small values of the parameter, then rise sharply to a peak, and then decrease. A vertical line is drawn at the peak of the left curve, and another vertical line is drawn at the peak of the right curve.
